

# GROUP 1

## Traffic Demand Management Group

Are there ways to improve the current congestion situation on Mahé? What happened if people started working earlier or later than usual? We need your help!

The intention is to flatten the peak hour curve for example with flexible working hours, minibuses for schools and employees. Your participation in this survey will be very valuable in this study, as it could contribute to a more comprehensive understanding and political decision-making.

Participation in the survey will take up around 10 minutes and is possible via PC, tablet or smartphone. We sincerely thank you for contributing to this study and wish you all the best.

### **Further information about the project and privacy policy:**

The purpose of this study is to collect and analyze residents' perceptions of the current transport system and several potential measures (such as minibuses, a more flexible tariff policy, a shift in the peak hour).

This study is under the umbrella of the project Transdisciplinary Lab 2021: Sustainable Land Use in Seychelles, which is a collaborative project between ETH Zurich, UniSey, SPA and DOT. Transport is used as a major land-use related topic and is the focus of the study.

This is an anonymized survey. No personal data (name, address or contact information) will be used in the study and further publication.

All data collected through this survey will be deleted right after the project. Participation in the survey is voluntary, and participants can revoke their consent to the processing of their own personal data at any time without giving reasons.

If you have questions regarding the study or your participation, please do not hesitate to contact us ([transport-surveys@ethz.ch](mailto:transport-surveys@ethz.ch))
